Lancaster Farming, Saturday, September 10, 1966

\$2 Per Year

**LET'S GET A LITTLE HEAT IN HERE** — Jay Rohrer, left, and John Yocum demonstrate the use of the Gastobac Co. equipment set up on the floor of Rohrer's tobacco shed. The experiment being carried out by PSU Field Research Laboratory is designed to eliminate, or reduce, shed burn of tobacco by adding heat during the curing stage.

## Eight Lancaster County Townships Apply For Drought Emergency Aid

Names of eight northern Lancaster County townships were submitted this week to the State Disaster Committee with the request that they receive assistance under the federal emergency livestock feed program, according to Miss Dorothy Neel, manager of the county Agricultural Stabilization & Conservation office.

Aid to individual townships has never been granted in the state, although Miss Neel said there is apparently nothing in the regulations to make such a request prohibitive. The last time ASCS requested drought emergency aid for less than

the entire county was in 1963. Although that request was denied at the state level, the county was later approved for aid.

The local committee determining the townships' need for assistance was composed of Fred Seldomridge, ASCS, chairman, M. M. Smith, county agent, extension service, and Frank Ackerman, Farmers Home Administration.

Townships requesting assistance were Penn, Conoy, Mount Joy, West Donegal, East Donegal, Rapho, Warwick, and Elizabeth.

Under the livestock emergency feed plan, Miss Neel said, farmers in those townships who could prove they have suffered financial loss because of drought, and need

## Soil Testing Reports To Be Streamlined, Vo-Ag Teachers Told

Soil test reports will be coming back to farmers with a brand new look one of these days, a vocational agriculture teacher told his fellow county association members Wednesday.

Lancaster County agriculture teachers heard Richard Hackenberger of Penn Manor High School agriculture department report on a Soils Workshop he attended this summer at Penn State University.

According to Hackenberger, fertilizer recommendations by Penn State's soil testing service will be specific for each of five soil types in Pennsylvania. The best soils will be grouped as Group I, and all others will be graded in groups II through V, depending upon their natural ability to grow

## Project Tests Effects Of Heat On Tobacco Curing

by Don Timmons

Lancaster County tobacco farmers, recalling last year's poor shed curing conditions, may be wondering what, if anything, can be done to avoid such a blow to the quality of their product in the future. At the Penn State University Southeastern Field Research Laboratory they think supplemental heat in the sheds may be the answer, and the staff is gathering data on the subject right now.

According to John Yocum, superintendent of the research station, practically no year is completely free of shed burn or rotting. "Sometimes you can't even see the damage, but micro-organisms working on the leaf will, at the very least, cause weight loss," Yocum explained.

Yocum said last year was a particularly bad year — although not as bad as in 1961 when a big, sappy crop resulted in losses of 50-60 percent through shed damage.

Fortunately, the station chose last year to begin its supplemental heating experiments. Unfortunately, the equipment wasn't available until three or four weeks after the tobacco had been hung in the shed, so its effects couldn't be completely deter-

mined. However, based on the data available from that limited experiment, Henry B. Engle, research agronomist, was able to estimate that for every dollar the project spent on heating the tobacco shed, a three-dollar return was realized. He figured a depreciation schedule of ten years on the equipment, and a total investment of \$270 for the two and one-half acres of tobacco treated.

## All-American Dairy Show To Host Nation's Most Outstanding Cattle

The Farm Show Building in Harrisburg next week will be the site of the All-American and All Dairy. They will come from fifteen states and Canada.

The week's events will open Monday with a junior dairy show for Pennsylvania 4-H and FFA youths. Entries will consist of 500 "blue ribbon" calves, heifers, and cows which earned their right to compete by being top animals selected at preliminary district shows. Many youngsters will also be competing in the open classes of the various breed shows. Monday night, at 6 o'clock, 45 females and three bulls will be offered in the annual

The six principal breeds to be represented in this year's show are: Ayrshire, Brown

Swiss, Guernsey, Holstein, Jersey, and Milking Shorthorn. (Continued on Page 5)

**HUMIDITY RISING?** — Jay Rohrer checks relative humidity gauge in his tobacco shed. The device is rigged on a rope and pulley so it may be pulled down from near the top of the shed for a reading, and then hoisted up again. When the humidity reading gets above 70 percent, the gas burners are turned on.

# Weekly Poultry Report

## Eastern Pennsylvania And New Jersey WEEKLY SUMMARY

### LIVE HENS

Hen prices mostly unchanged. Undertone weaker as processors tend to reduce prices for shipments after this week. Demand fair. Offerings adequate. Supplies on heavy hens barely adequate for a fair to good demand. Prices paid at farm: Light hens: 9-10c; Heavy hens 14-14½c.

### TURKEYS

Demand good on hens as some Koshers buying activity developed. Interest on toms fair. Supplies adequate. Prices on heavy hens ranged 23-25c with fancy quality mostly 24-25c. Toms under 25#, 22½c; over 26#, 23c.

### Fogelsville

September 6, 1966

Hens, Light 8½-11½, mostly 9-9½; Hens, Heavy 9½-18,

mostly 12-15; Pullets 25-35, mostly 27-32; Roasters 8-33, mostly 21-27; Turkeys, toms 18-22; Turkeys, hens 26-34, mostly 28-34; Rabbits 30-35; Guineas 40-50, mostly 40-45; Pigeons (per pair) 45-85, mostly 45-65; Jumbo Squabs 60-75, mostly 75.

Total Coops Sold: 614.

## Eastern Shore Exchange WEEKLY SUMMARY

Broiler and fryer lot-average prices for the three-day week averaged ½ cent lower at 16.59 cents per lb.

Prices paid during the period ranged from a high of 17.7 to a low of 15.7 cents per lb. Sales totaled 993,000 head, down about 700,000 head from the pre-holiday weekend last week.

### Delmarva

September 9, 1966

Market weaker today with

live supplies ample for needs. Ready-to-cook demand spot; slow to good, though lacked aggressiveness.

Estimated slaughter for Friday and Saturday, 941,000 head, compared to 1,049,000 head last weekend.

No prices at farm or reported purchases listed in today's report.

### ● Lancaster

(Continued from Page 2)

Pure Single Crosses—SX 9, SX 9A, SX 9B

The "family" of 9's is designed to meet the special requirements of your farm. Good standability and blight tolerance. Well adapted to high population and recommended for narrow-row planting. Very reliable and consistent. Excellent combine corn.

Pure Single Cross, SX 29

Bred for the farmer who's willing to go all out for yields. Plant at populations from 16,000 to 24,000. Ideal for narrow-row. Has ability to use high fertility and available moisture. All characteristics are excellent!

Pure Single Cross, SX 31

Does best with high fertility and above average population. Exceptional seedling vigor for early cultivation. Blight tolerant. Short plant for efficient machine harvest. We recommend SX 31 for narrow-row planting.

New 3-Way Cross, P-A-G 399

This blend of inbreds rivals the best single crosses for yield. With populations up to 22,000 you can depend on excellent seedling vigor and good standability. You'll appreciate 399's easy harvesting.

Great 3-Way Cross, P-A-G 272

Dark green color, low ear placement, exceptional standability, and uniformity. It's remarkable at populations from 16,000 to 18,000. Good blight tolerance. Open husk for low moisture at picking.

See your P-A-G dealer for Special Crosses and a wide variety of Four-Way Crosses to match your grain and silage requirements. You can do better with P-A-G!

## From Where We Stand . . .

### The Great See-Saw Watchers Society

Wheat's up, corn's down — no, now soybeans are up and small grain is down. Or was that last year? Anyway, the Department of Agriculture is back in the play-yard, and the name of the official game is "It's Your Turn to Watch the See-Saw".

The rules go something like this: when production of one of our basic crops isn't sufficient to meet demands for that year, the government will stimulate production of the deficit crop for the following year, thus bringing it into economic balance. If too much of a certain crop is produced, the government will reduce "incentives" on that crop in the following year so farmers will not raise so much of it.

Sound familiar? The same basic method was used a long time ago in this country, only then it was called "supply and demand"; it was played with real money, and was regulated by real prices in a real marketplace. The government once decided that the old supply-demand approach was inadequate for the modern world; too risky—suppose we should have a disastrous crop year? So, many years ago it was tied up neatly with a billion yards of red tape and stored away in a time capsule to enable earth people 500 years from now to see what primitive methods once ruled buying and selling of agricultural products.

Following the death and discrediting of supply-demand theories, the government began a general thirty-year Agricultural Program which gained distinction for little other than its numerous progeny. And "Papa Program" turned out to be a terrible parent. He never seemed to be sure where "the kids" were or what they were up to. He too often spanked the good ones and rewarded the worthless ones. But what his growing family lacked in merit it more than made up in costly bungling. However, it seemed they had a rich uncle of sorts named Sam; and Uncle Sam used to pat the little wayward programs gently on the head and say, "So, you flooded the world wheat market, you little mischief you," or, "My friends will manage to eat their way through those ten-cent pigs, so what's to cry? Just send me the bill, I'll fix it".

As farmers grew fewer and fewer and eaters greater and greater, "Sam" woke up one day and said, "These program kids are costing me too much money, who needs 'em? Voters I need, not farmers. Where will I find the voters? In the cities I can see it all now — I'll make the farmers a public utility. Any farms I don't need I'll convert to public recreation areas for the voters — I mean the deprived city dwellers".

So the boss gathered all the most brilliant men he could find and gave them the problem to solve. Lower the storage and handling costs on wheat and feed grains, he said. "And while you're at it, develop a no-carryover, low-cost, food program. And they did."

The agriculture secretary proudly told the boss recently that costs on handling grain had been cut \$200-million from the peak year of 1961, and that while he was about it he had also "neated-up" the pantry. He changed surplus to shortage.

"That's wonderful," the boss beamed. And then he threw open the pantry doors for a better look. "Why, it's neat all right, there's nothing for tomorrow! Suppose we don't get rain next year?"

"What's rain?" the secretary asked.

"Our machine doesn't deal in rain. Our buttons say Ca for carrots, Co for corn, W for wheat, P for pigs, and so forth. For rain we're not yet programmed; that's still under the weather bureau's jurisdiction, but we're working on it."

And that's the problem. The new "program" has the same physical limitations as the bewhiskered and bemoaned supply-demand approach. It can't control the weather, and yet it must rely somewhat on a constant rainfall factor if crops are to grow, and if button-pushers are to get corn when they push the Co button and wheat when they push the W.

In the face of spreading, worldwide hunger, and a war of increasing magnitude, this latest bit of administration tight-rope walking seems an unnecessarily risky measure. If it works, government agriculture administrative costs can be reduced by many millions of dollars. If it fails, it could bring back "Victory Gardens" and a democratic form of famine for all — regardless of race, creed or color.

### ★ ★ ★ ★ Litter America First

It would seem these days that people everywhere — on the highways, at the beaches, in the woods — have become dedicated to the proposition that a beautiful America must be concealed from the eyes of all travelers. To this end they are endeavoring to bury the countryside beneath a veil of litter.

We complain continually about high-cost federal programs, millions of dollars of taxpayers' money will be spent this year, and in succeeding years, on the American Beautification program. And yet, just let us out on the beach or the highway and we seemingly try to outdo each other in the amount of our garbage we can put into circulation.

Did you know that every pop bottle the highway crews in Michigan pick up and dispose of costs taxpayers of that state 34 cents — and they don't even get the 2-cent refund. Along the 559-mile stretch of the New York State Thruway last year \$200,000 was reportedly the clean-up bill. As more and more Americans are on the move, the littering situation is fast approaching the point of no return.

The anti-littering campaign has been one of continuing appeal to the general public, but it has not been enough, not nearly enough. Most states, and other organized areas have litter laws, but by sheer weight of numbers the offenders escape prosecution. The law enforcement agencies are going to need citizen help — not just cooperation in obeying the littering laws, but personal, involved help. Any community that attracts visitors, tourists, etc., should be sure it has a law with teeth to put the bite firmly on litter offenders. Secondly, it should be sure it has ample refuse receptacles well-distributed. Thirdly, citizens of each of these litter-target communities must start applying pressure on visitors — gently, if that works; but firmly, if they don't get the message.

If each one of us could point out to ten others what a sorry sight they are making of our respective communities, perhaps the offenders could be enlisted in the cause of the American rebeautifying campaign. After all, it's got to stop somewhere. Why not in your town, why not here?

### When Greed Controls Lesson for September 11, 1966

(Background Scriptures: Exodus 20:17; 1 Kings 21; Mark 10:17-22, 35-45; Luke 12:13-21, 29-34.)

Devotional Reading: Mark 10:35-45.

Francis Xavier once said that as a priest he had heard thousands of confessions, but never a confession to the sin of covetousness. It seems to be an unmentionable sin for most people.

Occasionally we hear someone admit to being a liar, a thief, an adulterer, or even a murderer, but who has ever heard someone acknowledge the sin of covetousness? It just isn't done. The tenth of the ten commandments receives very little, if any, attention.

Perhaps one reason may be that it is interpreted too narrowly. The literal meaning of the tenth commandment seems to put it within everyone's reach. When the tenth commandment says, "You shall not covet," it means that we shall not desire for ourselves what belongs to someone else. Few of us are consciously that greedy. We might desire to have a new car just like the one our neighbor has, but that doesn't mean we'd like to get his car away from him.

Through Eyes of Jesus  
Jesus, however, broadened the interpretation of this commandment. He brought it down to a level where few of us can avoid stumbling over it. "Take heed," he said, "and beware of all covetousness; for a man's life does not consist in the abundance of his possessions" (Luke 12:15 RSV). Having said this, he went on to tell a parable of a rich fool who sought to "lay up treasures" for himself. Covetousness, then, is more than desiring something belonging to

someone else; it is also being ruled by a desire for things.

As the tenth commandment was interpreted by many, its purpose seemed to be to protect the property of one's neighbor. When we view it through the eyes of Jesus, however, we find that, like all of the ten commandments, it is designed to protect me too. In this case: it purposes to protect me from the destructive power of my own greed. When greed controls our lives, it tends to destroy us from within.

Christians have always experienced conflicting feelings about material things. On the one hand, they have viewed them as part of the good creation that is God's world. On the other, however, they have realized that material things have the power to destroy the inner, spiritual life of man. The key to this dilemma is found in this question: are you in control of your material goods or are they in control of you? Material things may richly bless our lives according to God's will and purpose . . . so long as they do not gain control over us.

### Whom Do You Trust?

To covet, as Jesus saw it, means to allow one's self to be driven by greed for material things and values. There's nothing necessarily wrong in the desire to enjoy the things of this world, so long as that does not loom as the chief enjoyment of life. There's nothing wrong in desiring to "get ahead" financially and professionally, so long as we do not look to finances for ultimate security and professional status as the source of true happiness.

Jesus put it clearly. "Instead, seek his kingdom, and these things shall be yours as well." (Luke 12:31 RSV) Only one thing should really control our lives: our commitment to God, and his kingdom. When greed controls us there is no room for God in one's life. God is replaced by mammon, the religion of materialism. You cannot serve both.

Furthermore, greed also implies our distrust of God. He has promised to supply all our needs. Therefore when we scratch and scrape at material goods it is like saying that we don't really trust God's promise or are not sure that he can really take care of our needs. Is there any greater insult to him than this?

When greed controls the cart is pulling the horse.

## Now Is The Time . . .

By Max Smith, Lancaster County Agent

### To Ventilate Tobacco Shed

Tobacco harvest is in full swing throughout the county and the quality of the crop appears very good. The curing process will be improved with free air circulation through the shed at all times. Supplemental heat will aid in removing the maximum amount of moisture before cold weather arrives. During times of high humidity and little natural air movement, large fans may be used to keep the air moving.

SMITH

### To Raise Calves Properly

With the large number of real good dairy herds in the county, dairymen are urged to give special attention to the growing of their young calves. The demand for milk cows is strong and has a bright future; this is especially true of good heids with production records. Lancaster County has a reputation of including many of the outstanding heids in the state. Special quarters free from dampness and drafts are recommended with a pen for each young calf.

To Consider Fall Plowing if green manure crops, or some farmer have experienced better moisture conditions during a drouth year might have some application when the field was plowed in on local farms. When the fall or early winter. When ground is open it will contain erosion is not a problem and (Continued on Page 10)

## ● All-American

(Continued from Page 1)  
State Holstein Sale in the

Small Arena.

On Tuesday, September 13, some 250 exhibitors will show more than 550 entries in the State Black & White Show. John L. Morris, extension dairyman from the University of Maryland, will be placing the classes starting at 8 a.m. Thirty-one special awards sponsored by Holstein breeders will be presented to class winners. Brown Swiss entries will share the Large Arena with the Holsteins on Tuesday.

Ayrshire exhibitors have made the All-American their national show, and have a record 300 entries lined up for judging on Wednesday at 9 a.m.

Guernseys will also be judged on Wednesday, September 14, starting at 9 a.m. A Jersey breed sale will be held at 12:30 p.m., Wednesday.

On Thursday, all Jersey and Milking Shorthorn entries will be judged beginning at 9 a.m., and at 7 p.m. a Recognition Banquet will be held.

The show will conclude on Friday when any Holstein classes not judged earlier will be evaluated.

# SILO GUARD

Keeps the high energy nutrient content of fresh cut crops for winter feeding use

Here's what SILO GUARD is:

- the modern dairyman's or beef cattleman's way to prevent loss of valuable nutrients in his ensilage and to improve its flavor so that it is very palatable to cattle.
- a food grade product containing ingredients selected to influence favorable changes in ensilage so that cattle will get most of the nutrients present in fresh cut corn, sorghum, green oats, and millet, thus improving their milk production or weight gains.
- an aid to preventing ensilage losses and unpleasant ensilage odors.

# NOW SAVE 40¢ PER BAG ON AGWAY MILK REPLACERS

It's a sure way to cut calf-rearing costs this fall. The 40¢/bag discount applies to all three Agway Milk Replacers:

### VEAL-N-GRO

For herd replacements or for veal, Veal-N-Gro starts calves fast and grows them fast. Veal-N-Gro has everything calves need in generous amounts. In such generous amounts that it saves you money on top of the 40¢

discount. Compared to ordinary milk replacers, you need only a little more than half as much Veal-N-Gro to get calves through the critical first six weeks. In good health and at the right weight.

Veal-N-Gro is a 24%-fat milk replacer that is very high in milk product—70%. It contains antibiotics (25 mgs per lb.) to ward off calf disorders, and reconstitutes quickly in warm water.

### STED-A-MILK and MILKSAVER

Either of these two popular milk replacers takes calves through to the calf-feeding period at less cost than whole milk. Both are high in protein, and contain all the minerals and vitamins calves need to stay thrifty.

Order Agway Milk Replacer today to make sure of your 40¢/bag discount. Ask about the new 4-Week Early Weaning Program.

Note: With the price of milk on the rise, you can save up to ten dollars per calf by feeding an Agway replacer instead of whole milk. Agway Inc.

New 4-Week Early Weaning Program featuring Veal-N-Gro, another Agway dollar saver. Ask for details.

JAY ROHRER shown putting tobacco away on the unheated side of his tobacco shed. In the supplementary-heat-experiment, one-third of the shed is unheated and is separated from the heated part by a film of plastic. L. F. Photo

### ● Tobacco Study

(Continued from Page 1)  
Engle also reported that analysis of last year's experiment showed a 20 percent greater loss due to shed burn for tobacco cured in the unheated portion of the shed. The shed was divided by a floor-to-ceiling plastic barrier, and it was found that little heat transferred from the

warmer side to the unheated one-third of the shed. This year, the station has expanded its tobacco shed-heat study to two farms. One shed is on the Jay Rohrer farm at Manheim R2, about one mile from the research station. The other is a rented structure on the Frank Eshelman farm, which adjoins the PSU research farm. The Gastobac Co. of Char-

lotte, North Carolina, furnishes all of the heating equipment, and is paying installation and fuel costs. They are working locally through the C. W. Witmer Co. at Soudersberg. On the Rohrer farm, Jay Rohrer furnishes the shed and the tobacco. Personnel from the research station supply the supervision and some help, and will analyze the data.

### Now... three tractors with exclusive six-way hydraulic control of operations

In the size that's right for your farm... new 53 h.p. "2510," 70 h.p. "3020" or 94 h.p. "4020"... there's an exclusive closed-center hydraulic system to help you get the most productivity out of every operation. Through Power Shift... Power Steering... Power Brakes... double-action cylinders... Universal Hitch... hydraulically assisted PTO control... Power Differential Lock make work faster... easier. Add too, the greater flexibility offered in Power Shift models and you will get the feel of a new high in tractor performance. Take advantage of our offer and test one on your farm.

JOHN YOCUM, farm superintendent at the PSU Field Research Laboratory, shows the metering equipment that controls gas flow to the burners in the Jay Rohrer tobacco shed. Burners must be turned on and off manually, but once lighted will automatically adjust to high or low heat, depending on the humidity level in the shed. L. F. Photo

PLASTIC BARRIER rolls up in working section of shed to permit wagons to be brought in. Once the shed is full, plastic will be secured to separate heated and unheated sides of the shed. Jay Rohrer shows how plastic roll can be dropped down when ready. L. F. Photo

Tobacco has been going into Rohrer's shed since last Friday; he expects it will be filled by next Tuesday. But Yocum isn't waiting until the shed is filled up before starting the heat. He turns it on for awhile each evening, and feels this will help reduce moisture in the tobacco as it is hung, and will make it easier to control humidity

later. Although the burners must be turned on and off manually, they do have two-heat levels which operate automatically once they are ignited. When the relative humidity in the shed reaches 75 percent, the burners go on high heat; when humidity drops below 75 percent, they go on low heat. (Continued on Page 7)

## DAIRYMEN & CATTLEMEN!

Available Now in Lancaster and Chester Counties

### PRO - LIX LIQUID CATTLE FEED

A balanced liquid  
Feed containing  
30% Protein

12,500 Units Vitamin  
A per pound

A BLEND of pure cane blackstrap molasses, condensed fish solubles, condensed distiller solubles, brewers yeast, urea, phosphoric acid, vitamin A, copper sulfate and cobalt sulphate.

PRO-LIX—Makes every pound of feed worth more.

PRO-LIX—For cattle fed on poor quality hay.

PRO-LIX—For Fall and Winter pasture feeding.

PRO-LIX—For keeping cattle gaining on cobs, and wheat straw.

PRO-LIX—No labor. Self fed.

WHATEVER  
YOUR FEEDING  
OPERATION  
MIGHT BE  
PRO-LIX IS  
THE ANSWER  
TO REDUCED  
FEEDING COST  
AND INCREASED  
PROFITS!

PRO-LIX Fits every progressive dairy as well as beef program. It is a great "milk booster" when fed to dairy cattle in combination with a good dairy ration. In addition, what better way is there for the busy dairyman to feed his dry cattle and grow out his replacement heifers than feeding economical PRO-LIX free-choice.

## ● Tobacco Study (Continued from Page 6)

cent, they return to low heat. Each burning unit is capable of putting out 30,000 BTU per hour, Yocum said.

Although this equipment is relatively unknown in Lancaster County tobacco sheds, Yocum said it has been used extensively in flue-cured and burley areas. One burner will handle the tobacco in about 100 square feet of floor space, he explained.

As a side experiment, Rohrer and Yocum will try hanging tobacco closer together in one section on the heated side of the shed. If it cures as well as the less crowded tobacco, it would suggest that with supplemental heat more tobacco stalks could be handled per square foot, thus increasing the shed's carrying capacity.

Yocum suggested that supplemental heat may also be the answer to some of the slow-curing problems with Penn-

bel-69. Some farmers have complained in the past that because of Pennbel's closer leaf arrangement it was hard to cure.

Yocum felt that if the results of the heat study come up to expectations a meeting of interested farmers, extension service, and burner manufacturers may be arranged for next summer. More will be learned about the results as the tobacco begins to move through the stripping room this winter, Yocum said.

## ● Vo.-Ag. Teachers (Continued from Page 1)

crops.

Recommendations will be printed out on forms similar to that now used by cooperating Dairy Herd Improvement Association members. A bar graph for each nutrient will tell the farmer just how much fertilizer he needs to apply to his particular fields, based on their soil type and present state of fertility. This method will be much less general than the old standard way of reporting soil tests, Hackenberger said, and will help the farmer readily determine his own soil nutrient needs.

Hackenberger also told the teachers' association that he had ordered seed and weed mounts to be used for instruction purposes in county agriculture classes. These will be purchased out of the Fair Fund.

In a discussion of allowances

## ● DHIA (Continued from Page 1)

stered Holstein cows averaged 1,633 lbs. of milk, 63 lbs. of butterfat with a 3.8% test. The herd of C. Richard Landis, Horseshoe Road, Lancaster, placed second. His herd of 38.7 registered Holstein cows averaged 1,549 lbs. of milk, 59 lbs. of butterfat with a 3.8% test.

for travel to the various state and national shows by teachers and students, the association members felt a reevaluation of the rules and regulations governing such trips was overdue. Members indicated their feelings by a show of hands on the reevaluation question. Acting president Lewis Ayers announced he will appoint a committee to study the issue and report back to the group.

T. M. Malin, area adviser, noted the area FFA Leadership Conference will be held in Lancaster County this year. Warwick High School was chosen as the site and the tentative date was set for October 27.

The leadership session is an annual affair in which all of the FFA chapter presidents and vice presidents get together for instruction on their duties and responsibilities by the teachers, and county and state FFA officers. There will also be a training session in public speaking and parliamentary procedures.

Malin also announced that Larry Breneman, Lampeter-Strasburg High School, will be going to the dairy show at Waterloo, Iowa, as a result of his 10th-place ranking in State FFA Dairy Judging.

The next county FFA meeting is scheduled for Solanco High School on September 26 at 4:30 p.m.: Boys competing for the three dairy calves annually donated to FFA members by the county breed associations will be interviewed at that time.

The next county agriculture teacher's meeting will be held at Penn Manor High School on October 6, at 4:30 p.m.

## ALL "Certified" SEED IS NOT ALIKE

DON'T LET ANYBODY tell you all Certified seed is the same. There IS a difference!

No other Pennsylvania seed producer can equal Hoffman's long experience in producing large quantities of seed grains.

Hoffman quality makes a big difference too. Hoffman begins with good foundation seed, grows it in selected fields under personal supervision. It's cared for and harvested under special conditions to maintain high quality. Better cleaning, careful laboratory testing and good handling and storage round out the quality picture.

The certification tag is not enough. Hoffman tags on the seed you sow can mean bigger crop profits for you. That fact has been demonstrated over 60 years.

Get complete information and prices on Hoffman BARLEY, WHEAT and RYE.

## Ballots For Lamb and Wool Referendum Sent

Ballots for voting in the referendum on lamb and wool promotion and marketing development program were mailed Friday to 238 eligible farmers in Lancaster County, according to ASCS chairman Fred Seldomridge. Ballots are to be returned to the county ASCS office by September 23, he added.

The referendum will determine whether or not deductions will continue to be made from producer payments under the National Wool Program.

Funds collected are used by the American Sheep Producers Council to carry out a program of advertising, promotion and related activities under an agreement with the Secretary of Agriculture.

The proposed agreement will become effective if approved by at least two-thirds of the total number of producers voting, or, by producers having at least two-thirds of the total volume of production represented by votes in the referendum.

If approved, the new agreement will replace the one which has been in effect since the 1955-crop year. If not approved, no deduction will be withheld from payments on 1966 marketings, and ASPC programs will be continued only as long as present reserve funds permit.

Approval of the new agreement would authorize payment deductions of up to 1½ cents per pound on shorn wool, and up to 7½ cents on unshorn lambs. The new figures compare with 1 cent and 5 cents in the past.

Producers eligible to vote are those who have owned sheep or lambs six months of age or older for at least 30 consecutive days since January 1, 1966. Any producer not receiving a ballot, and wishing to vote, is instructed to contact the ASCS office, Manheim Pike, Lancaster.

## Now Is The Time

(Continued from Page 4)  
more of the moisture from rain and melting snow.

### To Control Livestock Parasites

All species of farm animals may suffer from internal parasite infection, years ago we were more concerned with the control of worms in hogs and sheep. However, at the present time cattle feeders and dairymen should also take measures to eliminate stomach worms. Many lots of feeder cattle imported into the county are infected, and treatment at the beginning of the feeding period will pay big dividends. Your local veterinarian should be consulted regarding this important management problem. Don't feed the worms.

## Diaster Townships

(Continued from Page 1)  
assistance to maintain dairy foundation herds, would be eligible for Commodity Credit corn if the ASCS request is granted.

Miss Neel stated it would probably be several weeks before word would be received from the state, and then longer until the state's request could be processed in Washington, D.C. where it requires approval by the Secretary of Agriculture. October 1st would probably be the earliest possible date for aid to become available, assuming the request is granted, Miss Neel said.

## Weather

Temperatures for the next five days are expected to average above the normal range of 79 to 58 degrees. Little day-to-day change in temperatures will occur, but the warmest part of the period will be about mid-week.

No real rain is in the forecast but some light precipitation in the form of scattered showers may yield 1/10 inch late Saturday or Sunday.

## EARN MORE MONEY FROM YOUR STEERS

Here is the way you can do it —

Place Red Rose 32 Beef Cattle Supplement or Red Rose 50 Beef Cattle Supplement in your feed troughs! These supplements are concentrated sources of essential ingredients which provide nutrients in proper levels and in correct ratio to overcome grain and roughage deficiencies. Combined with your grains and roughages these supplements make balanced, high-production rations for your steers.

**Red Rose**

### 32 BEEF CATTLE SUPPLEMENT

This is a complete supplement containing urea as a protein extender — fortified with high levels of vitamins A and D, trace minerals, and an adequate level of phosphorus. You can use 32 Beef Cattle Supplement as a mixing ration for your home grains, or as a protein supplement to balance the feeding of low protein roughages.

**Red Rose**

### 50 BEEF CATTLE SUPPLEMENT

This supplement is in mash form. Feed 50 Beef Cattle Supplement at the rate of one pound per head per day.

You'll make high production rations for your steers when you use Red Rose Cattle Supplements. Your steers will reach market weights faster—and you'll be pleased with the fine condition of your herd, too. Don't wait — use these supplements now!

## FREE! \$2.95 Johnson ROPE HALTER

with coupons from Red Rose Horse Feeds

Every stable needs rope halters, and as an introductory offer you can get famous Johnson Halters free. Soft, strong Johnson Cotton Halter, guaranteed against breakage for one year. In horse or pony (foal) sizes.

You'll find coupons and complete details inside every bag

**Red Rose**  
HORSE FEEDS

Regular Horse Feed • Super Horse Feed • Classic Horse Feed  
Equinader Feed Supplement • Lancaster Horse Pellets

WE ARE FEATURING THE COMPLETE LINE OF RED ROSE HORSE FEEDS

Now — you can attack the roundworm problem in steers and dairy cows by feeding Red Rose Cattle Wormer with Thibenzole. Until Thibenzole was developed there was no efficient way for dairymen or cattlemen to control damaging roundworm parasites. Red Rose Cattle Wormer controls these worms in a one-feeding wormer. It can be fed to pregnant cows, young calves and heavily-parasited dairy or beef animals.

When you establish a roundworm-control program on your farm with Red Rose Cattle Wormer with Thibenzole in the feed — you can be assured bigger, faster-growing calves and heifers, earlier breeding size, and better performance of steers and cows.

#### RED ROSE CATTLE WORMER is

- Effective** — kills adult and immature worms.
- Palatable** — Thibenzole has no taste. Animals don't go off feed.
- Convenient** — animals need not be re-strained to be wormed. It's easy to feed to range animals in cube form.
- Profitable** — its costs will be returned in extra weight gains, faster growth, earlier breeding, and a better herd.

Start a roundworm-control program on your farm today by using Red Rose Cattle Wormer. Your Red Rose Dealer will explain the advantages of this wormer and will suggest recommended dosages and method of worming.

#### S-O-S

(Sack-of-Silage) is the answer to dry pasture. S-O-S replaces hay, ensilage or pasture. It's succulent, palatable and bulky — and can be mixed with home grains. Why don't you try it?

## Egg Cartons To Be Tested For Consumer Preference At NEPPCO

The egg carton designs from among hundreds manufactured in the Northeast which appeal most to housewives will be a starring attraction at the upcoming show of the Northeastern Poultry Producers Council (NEPPCO).

A panel of suburban homemakers from the Philadelphia area has been selected and will meet to award 20 blue ribbons to the most eye-catching egg cartons during the week prior to the show. The winners of this consumer-preference contest will be displayed prominently at the NEPPCO Exposition on October 4-5-6 at the Farm Show Building in Harrisburg.

The contest may help solve the problems which have baffled carton designers for years as to the relative merits of eye-catching designs versus packages with transparent lids

and the appeal of specific colors in carton design.

Just prior to the Exposition, the panel will be called together and asked to vote for those cartons they would prefer, assuming all the eggs in all the cartons were of the same quality. The results of voting will not be made public until the first day of the Exposition, October 4.

A total of twenty blue ribbons will be presented to the manufacturers of the twenty egg cartons receiving the greatest number of votes. The carton receiving the most votes will be awarded the "Best of Show—Gold Award." These awards are expected to attract widespread interest.

All cartons entered in the show will be displayed in a special area of the exhibit hall during the Exposition.

(Continued on Page 16)

## Local Holstein Cow Classified "2E"

An outstanding registered Holstein aged cow in the herd of Robert H. Kauffman, Elizabethtown R1, was recently awarded an "E" designation for body type conformation, according to the Holstein-Friesian Association of America.

On the basis of her previous classification of "Excellent," Oliverdale Inspiration Terry received a 2E rating. She is owned jointly by Kauffman and J. Robert Hess, Strasburg R1.

According to the Holstein Association, this new phase of its breed improvement program provides additional recognition for "Excellent" cows that are reclassified "Excellent" beyond the age of maturity. Only about one percent of the 75,000 registered Holsteins classified each year attain the "Excellent" status, the Association said.

Lancaster Farming, Saturday, September 10, 1966—13

## Lebanon County Girl Named Pa. Poultry Queen

A pretty, freckle-faced nineteen-year-old Lebanon County farm girl, Donna Jean Heagy, was named State Poultry Queen for 1966 recently at the Pennsylvania Poultry Festival held in conjunction with "Dutch Days" at Hershey.

Miss Heagy is the daughter of hatching egg producer J. Harold Heagy and the late Mrs. Heagy. She is 5'4", has red hair, and her eyes are hazel. Miss Heagy, of Lebanon R4, graduated from Annville-Cleona High School and is a junior at Elizabethtown College. She wants to become an elementary school teacher following graduation.

Runnerup in this annual pageant was Mary Ann Rus-

kavich, Sunbury R1. She is the daughter of Mr. and Mrs. Peter Ruskavich, and the family is in the pullet growing business. Miss Ruskavich is preparing for a career in nursing at the Pennsylvania School of Nursing in Philadelphia.

Crowning of the new queen by last year's popular Poultry Queen, Ruth Konhaus of Mechanicsburg, highlighted an active week for the Poultry Federation. During the festival, 12,750 chicken halves were barbecued. Over 20,000 rolls, 400 loaves of bread, 500 pounds of butter, 550 pounds of turkey white meat, one ton of turkey barbecue, 400 quarts of eggnog, 360 dozen eggs, over 30,000 beverages, and more than 1,000 gallons of chicken corn soup were required to feed the crowds brought out by the generally fair and cool weather.

Chairmen for this annual (Continued on Page 16)

• FINEST SERVICE ANYWHERE •

## For the Farm Wife and Family

By Mrs. Richard C. Spence, Food Editor

### Especially For Tired Summer Appetites

Baked Potatoes with Sour Cream in individual casseroles is a new and different way to serve that favorite combination. The potatoes are layered with onions and a savory sour cream sauce. A wreath of buttered corn flake crumbs and grated cheese provides zesty crunchiness. Especially delicious served with a baked ham. And easy to make too because you can bake them right along with the ham.

#### SPRINKLE BAKED POTATOES WITH SOUR CREAM

- 2/3 cup chopped onions
- 3 tablespoons butter or margarine, melted
- 1 1/2 cups dairy sour cream
- 2 eggs, slightly beaten
- 4 cups sliced, cooked potatoes

- 1/2 teaspoon salt
- 1/8 teaspoon pepper
- 1/2 cup corn flake crumbs

1/4 cup grated cheddar cheese  
Cook onions in 2 tablespoons butter until golden brown. Combine sour cream and eggs. Place half the potatoes in greased individual casseroles or a 1 1/2 quart baking dish. Spread half the onions over potatoes; pour on half the sour cream mixture. Repeat layering, using remaining potatoes, onions and sour cream mixture. Sprinkle with salt and pepper. Combine corn flake crumbs, cheese and remaining butter. Sprinkle crumbs mixture over potatoes. Bake in moderate oven (350 degrees) about 25 minutes. Makes 6 to 8 servings.

Have lots of tomatoes on hand? Try serving them this way.

#### CRUSTY CHEESE TOMATOES

- 4 large tomatoes, stems removed
- 1 teaspoon salt
- 3/4 teaspoon pepper
- 1/2 cup grated sharp Cheddar cheese

1 cup rice krispies  
1/4 teaspoon paprika  
2 teaspoons butter or margarine, melted  
Cut tomatoes in half crosswise. Place cut side up in ungreased shallow baking pan. Sprinkle with combined salt and pepper, then with cheese. Combine rice krispies, paprika and butter; sprinkle over cheese. Bake in moderate oven (350 degrees) about 20 minutes. Makes 8 servings.

Here are two ways to serve shrimp — in a salad and in a hot main dish.

#### SHRIMP ASPIC PIE

- Pie:
- 60 onion crackers, finely rolled (about 2 cups crumbs)
  - 1/4 cup melted butter or margarine
  - 1 (3-ounce) package mixed vegetable flavor salad gelatin
  - 1 cup boiling water
  - 3/4 cup cold water
  - 2 teaspoons cider vinegar
  - 1 1/2 cups medium-sized cooked, cleaned shrimp (about 1 pound uncooked) or 2

(4 1/2 ounce) cans, rinsed and drained  
1/2 cup diced green pepper  
2 tablespoons thinly sliced radishes  
1 small grapefruit, sections halved and well drained  
Salad Dressing:  
1/2 cup skim milk cottage cheese  
1/4 teaspoon sugar  
1/4 teaspoon lemon juice  
1/8 teaspoon curry powder  
Dash of ground white pepper  
1/4 teaspoon salt (optional)  
1/2 cup plain yogurt

To prepare pie: Blend together cracker crumbs and butter or margarine. Press firmly against bottom and sides of a 9-inch pie plate. Bake in a preheated moderate oven (375 degrees) 10 to 12 minutes. Cool. Dissolve salad gelatin in boiling water. Stir in cold water and vinegar. Chill until mixture begins to set around the edges. Combine next four ingredients; fold into gelatin. Chill again until mixture mounds slightly. Pour into pie shell. Chill 3 to 4 hours or until firm. (Continued on Page 18)

## Red Meat Production Down 10% In July

Production of red meat in July declined from June levels in both the state and nation, according to the Pennsylvania Crop Reporting Service.

July output in Pennsylvania totaled 72,303,000 pounds, 10 percent less than in June and 2 percent less than in July last year. Total production for the first seven months of 1966 was 559,647,000 pounds, about 1 percent more than last year.

Commercial production in the United States totaled 2,421 million pounds in July, 9 percent less than in June.

Stocks of all meats in cold storages in the nation on August 1 totaled 492 million pounds, 26 million pounds less than a month earlier, but 50 million pounds more than supplies on hand August 1, 1965.

The dairy industry is the second largest food industry in the nation, accounting for about one-fifth of the total retail value of foods produced and consumed in the nation.

Americans consume record breaking quantities of frozen dairy foods. Ice cream and other frozen dairy treats totaled more than 21 quarts per person in 1965, nearly one pint higher than in 1964.

Lancaster Farming, Saturday, September 10, 1966—15

## For the Farm Wife and Family

### Ladies, Have You Heard? . . .

By Doris Thomas, Extension Home Economist

#### Magical Casseroles

Casseroles come about as near to magic as a busy homemaker can get. For these successful, quick, and easy dinner-in-a-dish.

Keep canned meats, soups, and vegetables on hand. They'll help you serve a pleasant casserole dinner to unexpected guests.

Use any leftover meat or vegetable as the beginning of a casserole.

Unusual sauces and seasonings keep these leftovers from seeming like the same foods just warmed over.

You can prepare casseroles in a short time, or you may want to fix them ahead of time and store in your refrigerator or

freezer. Cooking time is usually short, since most of the ingredients, extra rice, macaroni, potatoes, or other starchy food you freeze a casserole, you have to allow time for it to prepare for the first one. (Continued on Page 20)

## FREE Hearing Tests Friday, Sept. 16

**MOUNT JOY**  
10 a.m. 'til 1 p.m.  
Location:  
On East Main Street  
near the Theatre

**MANHEIM**  
2 p.m. 'til 6 p.m.  
Location:  
Market Square in  
front of Silco Store

An Electronic Mobile Hearing Test Unit will give free hearing tests Saturday in Mount Joy and Manheim.

The test consists of a series of tones transmitted thru earphones at various tone levels. Each ear is tested separately and the technician in charge will be able to determine immediately if a hearing loss is present and the approximate percentage of loss.

Information will be available on ear surgery and all types of hearing aids.

YOU'VE GOT TO HAVE A SYSTEM... JAMESWAY POWER CHORING

## BIG J CLEANING SYSTEM CLEANS FAST—23' A MINUTE

Moves liquids and solids. Galvanized elevator at no extra cost. Heavy-duty forged links—reversible for extra wear. Built for years of trouble-free use.

Heavy-duty galvanized steel elevator and "backbone" are exclusive with Jamesway chain barn cleaner. And you get them for the same price as a painted unit. The Big J works fast to cut cleaning time. You can clean gutters, load, field-spread and return before many other systems are even through cleaning the gutters. We also sell and service famous shuttle-stroke cleaners.

**MILLER**

## SMALL GRAIN SUPREME 5-11-14

with Rheolite (R)

A quality fertilizer designed to help the grower achieve higher grain yields and make more profit. Miller's Small Grain Supreme offers the following extras:

1. Stronger straw to help prevent lodging.
2. More uniform crop with fuller kernels.
3. Crop will ripen more evenly.
4. Crop is in better condition for overwintering—less plants lost.
5. More nutrient value in the harvested crop.
6. Is a mineralized granular product.
7. Contains RHEOLITE(R) — Miller's organic fertilizer lubricant which insures free flowing qualities.

### What's New in Feeding Cattle?

## Ful-O-Pep Cattle-izer Beef Supplement

An entirely new concept in cattle nutrition opens up new profit possibilities for cattlemen everywhere. Based on a whole new principle in feeding, Ful-O-Pep Cattle-izer Beef Supplement changes the proportions of organic acids produced in the rumen. As a result, up to 20% more energy is available to the animal, as compared to the same amount of regular feed without the new concept.

This extra energy means faster gains, less feeding time to market, and considerable lower feeding costs. For thousands of cattlemen, it means extra profits.

Try the new concept soon.

Get the BIG silo unloader value!

## VanDale

**Delivers more silage faster!**

Double auger system digs the silage faster and more evenly under all conditions whether silage is frozen, wet, or dry.

Exclusive, adjustable drive hub gives more positive traction, keeps the machine operating evenly, and requires less power.

Patented 3-point suspension keeps unloader level at all times and centered for more efficient operation.

### DELIVERS BETTER SILAGE TOO!

The double augers, operating in conjunction with the patented V-paddle impellers, dig the silage, mix it thoroughly, and then throw it down the chute. Your cows and cattle get good, palatable silage... not a powdered mash as so often happens with unloaders using blowers.

## Crop Roundup

The outlook for many fall crops, including later plantings of corn, is somewhat improved in some parts of the state as a result of weekend rains, according to the Pennsylvania Crop Reporting Service.

Lancaster Farming, Saturday, September 10, 1966—17

ice. The showers provided much needed relief in many sections of the state—except the extremely dry south central area, and came just in time for continuation of growth of corn, which had started to dry out again. The showers should improve pasture and

hay prospects also. Cutting of corn for silage is getting into full swing throughout much of the state. Other major farm activities during the week included plowing and preparing seedbeds for fall seeded grains, picking tomatoes and peaches, cutting tobacco and digging potatoes.

### CORN

Above normal temperatures last week dried out soils and the corn in many fields started to wilt again. Weekend rains in many areas should give a final boost to corn intended for silage. Cutting of corn for ensilage is underway in most southern and central counties, with much of the crop normally harvested for grain now diverted to silage this year.

### GRAINS

Oat harvest still lingers on in a few extreme northern counties, but is practically completed state-wide. Plowing and working ground for fall seedings is well advanced in central and southern counties, with sowing of barley just getting started. Plowing was delayed in some areas because of hard and dry ground.

### HAY AND PASTURES

Growth of hay fields and pastures was improved by mid-August rains, but continued hot, dry weather soon halted development. Growth should be improved in many areas by recent showers. The amount of feed being obtained from pasture is still below normal throughout the state, with supplemental feeding still common in most areas. The second crop of alfalfa has been made in most areas, with chances for a good third crop slightly improved now.

### FRUIT

Picking of Elberta and other late varieties of peaches is nearing peak in the important Adams-Franklin-York area and is just getting started in the Berks-Lehigh area. The fruit is small but quality is good. Harvest of early apples continues in all areas. Sizing of the later, more important varieties is slow to start, with harvest to get underway shortly. Grapes are still making favorable progress in Erie County, with an above average crop expected. They are coloring fast, and harvest is expected to start at the end of September.

### OTHER CROPS

Tobacco cutting is underway in Lancaster County where growth has been very uneven. Nearly one-third of the crop has been harvested. Weekend rains should help potato sizing in the north, where moisture was limited. Harvest of tomatoes for processing continues, with small size and fair to poor quality in most areas. Blossom end rot and cracking are troubling many growers and processors.

### Two County Banks Announce Merger

As of September 1, 1966, the First-Columbia National Bank of Columbia became known as the Columbia Office of the Lancaster County Farmers National Bank of Lancaster. Merger of the two institutions was approved recently by the Comptroller of the Currency in Washington, D. C.

Stockholders of the Columbia bank will receive three and one-quarter shares of County Farmers Bank stock for each one share of First-Columbia.

This will be the thirteenth office for the parent bank. Columbia branch manager will be Sylvester J. Welsh, assistant vice president.

## Do you know how much milk your cows can really give?

Did you ever hear of a poultryman who gathered his eggs and then decided how much feed to give his hens? Or of a hog man who weighed his pigs and then decided how much feed they ought to get next day?

But how many dairymen do you know who weigh Bossy's milk, then decide how much feed to give her?

Doesn't make sense, does it?

Wayne's New Concept Dairy Feeding Program does! It leads Bossy into high production with high grain feeding FIRST.

Then you adjust to the most profitable level, after you've learned how much milk Bossy can really give.

More dairymen every day are discovering the advantages of Wayne's New Concept Dairy Feeding Program, how Wayne's high-quality, multi-sourced ingredients pay off in the milk pail.

It works for them—it can work for YOU. Come in and talk it over.

**FUNDS DONATED BY  
FARM WOMEN NO. 1**

The Society of Farm Women met last Saturday at the home of the Misses Stauffer, Lititz R3, when a plant and food sale was held. Mrs. John Newcomer, Lititz, was the auctioneer. Mrs. C. V. Smith led the devotions and Mrs. Dean Fyock was the songleader. Roll call was answered by giving a response to "this is the time to..."

Mrs. Clayton Sangrey, president, conducted the business meeting. Donations were presented to the Migrant Fund, \$5, and to the United Fund Campaign, \$10. Mrs. Sangrey announced she had received an offer from Isaac Buckwalter, Manor Oaks, Millersville Rd., for the purchase of peonies by members of the Society. They are the Edulis Cuperba variety. They sell for \$1 a clump or six for \$5. Orders may be given to Mrs.

**● For The Farm Wife**  
(Continued from Page 14)

To prepare dressing: In a small bowl, thoroughly blend first five ingredients and salt, if desired. Fold in yogurt. Cover and chill at least 1 hour. Makes 1 cup salad dressing and 6 servings of pie.

**CURRIED SHRIMP**

- 2 cups sliced onions
- ½ teaspoon minced garlic
- 1 cup diced celery
- 3 tablespoons shortening
- 2 tablespoons flour
- 1 teaspoon salt
- ½ teaspoon pepper
- 1 teaspoon curry powder
- 2 cups milk
- 2 cups diced, cooked, cleaned shrimp
- ½ cup quartered blanched almonds
- 2 tablespoons chopped pimiento
- 3 cups rice krispies
- 3 tablespoons butter or margarine, melted

Cook onions, garlic and celery in heated shortening until lightly browned. Mix flour, salt, pepper and curry powder, combine with cooked vegetables. Add milk gradually, stirring constantly, cook until thickened stirring occasionally. Fold in shrimp, almonds and pimiento; simmer about 10 minutes. Mix rice krispies with melted butter, heat thoroughly. Arrange rice krispies in center of heated platter, surround with Curried Shrimp. Make 6 servings.

**DUTCH TREAT**

- 1 pound flounder fillets (4 pieces)
- ½ teaspoon salt
- ¾ teaspoon ground black pepper
- Grated rind of 1 lemon
- 2 (1-ounce) package frozen asparagus spears, partially cooked in salted water
- 2 tablespoons butter or margarine, melted
- ¾ cup water
- 2 tablespoons lemon juice
- 1 tablespoon finely chopped onion
- 2 teaspoons prepared mustard
- Paprika for garnish
- 4 Holland Rusk

Wash and dry fillets. Sprinkle skinned side of each fillet with combined salt, pepper and lemon rind. Place asparagus spears at one end of each fillet. Roll up; secure with toothpick. Place in a well-greased baking dish; brush with butter or margarine. Combine next four ingredients. Pour over fish; sprinkle with paprika. Bake in a preheated hot oven (400 degrees) 25 to 30 minutes. Baste once or twice while cooking. Serve on Holland Rusk. Spoon sauce over fillets. Makes 4 servings.

Sangrey. Six hundred bushes are available. Members are reminded that dues will be received at the next meeting.

The Society Women will meet at St. Paul's Lutheran Church, S. Broad St., at 12 noon on September 10 to go to Quarryville where they will be entertained at the Abram Herr School House by the Society of Farm Women 19.

Women interested in making apple butter at the Landis Valley Farm Museum are asked

to be at the museum at 8 a.m. on October 1.

The next meeting will be held on Thursday, October 6, when the women will go to the UGI in Lancaster. A Chinese cooking demonstration will be presented to the group at 7:30 p.m. Members and guests planning to attend should notify Mrs. Sangrey. Luncheon tickets will be available at this meeting for the County convention to be held November 5 at 10 a.m. at Solanco High School.

These are some of the finer quality feeder pigs in the East.

**Sale at 1:30 P.M.****NORMAN M. MARTIN**

RD 1, Myerstown, Pa.

**Reduce Crop Losses!****Feeders, Dairymen! Sealed  
Storage Can Help You Do It!**

Don't let hot, dry weather cut you completely out of your corn crop profits! An investment in Butler sealed storage can save the day!

If you normally expect a yield of 100 bushels per acre—and dry weather cuts this yield in half—your 50-bushel crop, cut as silage and stored in a Butler Stor-N-Feed unit, will produce as many pounds of beef or pounds of milk as your 100-bushel yield, when harvested as grain. It also will pay you to investigate late forage crops such as sudan hybrids. Put up as low moisture silage, the nutrient yield per acre is very attractive.

See us today for details on a proven Butler Stor-N-Feed system... big capacities, fast discharge rate, mechanically reliable—and priced thousands of dollars less than some systems. Low-cost "Pay-As-You-Grow" financing readily available!

## Peach Crop Cut 40 Percent

This year's fresh peaches are of good quality, but they are smaller. The hot, dry summer has given peaches good color, but caused smaller than usual size, says June Wilke, extension home economist, Chester County.

In addition to dry weather, spring freezes reduced total supply. But in spite of adverse conditions, about 60 percent of Pennsylvania's peach crop will come in. Peak supplies will be marketed in late August and early September.

Handle peaches carefully in the store and at home. Don't squeeze or pinch them. Look for firm, fresh looking peaches that have a creamy or pale yellow background. Red blush, or color on the peach's cheek, varies and is not always a sign of quality.

**CANNING**  
You'll get three to four medium peaches from a pound. Buy them by the bushel —

that's 48 pounds — for canning or freezing. This amount yields between 34 to 48 pints, depending on fruit quality. Although most varieties are suitable for freezing, or canning, there are a few guidelines. Peaches are best for freezing or canning at the peak of the season. Elbertas are recommended for canning only; the Haven varieties are considered best for freezing, but can also be canned. All

Haven varieties, except the Halehaven, are resistant to browning.

When a bushel of peaches costs between \$3 to \$4, a pint of home canned or frozen peaches will cost 15c to 17c. This includes the cost of containers and sugar.

## New Area SNF Records Posted For Holsteins

The performance records of registered Holstein cows in area herds have been listed in an official production testing report from the Holstein-Friesian Association of America. Included are levels of solids-not-fat (SNF) production for individual animals.

Listed among the latest official records were:

Roaring Maples Regal Tiny, a seven-year-old registered Holstein cow, owned by Roy H. & Ruth H. Book, Ronks, produced 15,530 lbs. milk, 642 lbs. butterfat, and 1,487 lbs. solids-not-fat in 305 days.

Nancy Leader Knollwood, a five-year-old registered Holstein, has credits of 22,530 lbs. milk, 960 lbs. butterfat, and 1,951 lbs. solids-not-fat in 351 days. Red Rose Nancy Skyliner, a three-year-old, has produced 19,390 lbs. milk, 643 lbs. butterfat, and 1,618 lbs. solids-not-fat in 334 days; Inka Star Betty, a five-year-old, had 22,490 lbs. milk, 842 lbs. butterfat, and 1,868 lbs. solids-not-fat in 350 days. All are owned by John W. Eshelman & Sons, Lancaster.

Trout Spring Sov Duane Pontiac, an eleven-year-old registered Holstein cow, owned by John E. Kreider, Lancaster, produced 17,520 lbs. milk, 729 lbs. butterfat, and 1,551 lbs. solids-not-fat in 305 days.

Valley Run Regal Jane, a five-year-old registered Holstein, has credits of 18,180 lbs. milk, 637 lbs. butterfat, and 1,446 lbs. solids-not-fat in 305 days. Valley Run Sovereign Cinder, an eleven-year-old, has produced 13,614 lbs. milk, 600 lbs. butterfat, and 1,208 lbs. solids-not-fat in 305 days. Both are owned by Arthur D. & Mary K. Wenger, Manheim.

Vista Grande Admiral Anna, a seven-year-old registered Holstein, has credits of 20,930 lbs. milk, 843 lbs. butterfat, and 1,800 lbs. solids-not-fat in 305 days; Glenlap Regal Bess Ruby, a six-year-old, has produced 16,890 lbs. milk, 639 lbs. butterfat, and 1,481 lbs. solids-not-fat in 305 days; Vista Grande Haven Mona, a five-year-old, had 18,300 lbs. milk, 631 lbs. butterfat, and 1,641 lbs. solids-not-fat in 300 days; Elroc Velma Follow On, a five-year-old, had 15,490 lbs. milk, 624 lbs. butterfat, and 1,324 lbs. solids-not-fat in 300 days. All are owned by Carl L. Martan, Ephrata.

## STOP THAT DRIP

Leaky faucet bothering you? Well, it may bother you even more if you add up the wasted water. At one drop each second, one faucet wastes a quart of water every hour. That's 7 gallons a day, or 210 gallons a month, or 2,520 gallons a year.

In 1965, for the tenth consecutive year, an increase was recorded in the consumption of milk through the National School Lunch and Special Milk Programs. Approximately six billion half pints of milk were consumed by children participating in these programs in 1965.

## ● Have You Heard

(Continued from Page 15)  
You'll save money by including a casserole in your menus. With a salad, vegetable, dessert, and beverage the meal is complete.

### Pressing Preserves Leaves, Ferns

You can preserve leaves, ferns, and nonbulky flowers for winter arrangements by pressing. For best results:

Use several thicknesses of newspaper or any paper without a shiny surface.

Place the material flat on the bottom layer of paper and smooth out.

If you place leaves in natural curves, they dry that way and are much easier to use.

Place a second layer of pa-

per on top and weight down with boards to keep the leaves flat.

It takes two or three weeks to complete the drying process. Keep Knives in Good Condition

Knives stay in good condition through reasonable care, rather than frequent sharpen-

ing. This means:

Cutting on a board.

Protecting a knife in storage, not storing it with other tools.

Never use it to pry off lids, open packages, or sharpen pencils.

Use an old, inexpensive knife for rough jobs.

Never use a knife to open cans... it's unsafe.

Heat is harmful to knife blades. Too hot water can spoil steel, and the handle of a knife is more delicate than the blade.

Keep knives clean and sanitary and dry thoroughly before storing.

Use a cleaver to cut bones

... not a butcher knife. Bones can dull sharp knives.

### Pears Plentiful

Bartlett pears are plentiful now. When mature, they'll have a rich yellow color and a distinct aroma. Don't mistake Bartletts for the later, winter pears which never turn bright yellow.
